

# Majestic Wall System

Transforming unused basement space into usable living space is an economical and practical way to increase your home's square footage. For years, homeowners and remodelers have struggled with basement projects because traditional building materials are not well suited to the damp conditions found in most basements. With Elite's Majestic wall system, however, those days are gone. Our wall systems are specifically designed with water impervious materials for use in damp settings or locations subject to water intrusion – and they won't swell, buckle or stain like conventional building materials.

Elite's foam core panel is at the heart of the system, insulating your room and allowing you to create an entirely new indoor environment. Unlike main living areas upstairs, the extra room you add in the

The space you need  
is right under your feet.

basement can be as flexible as you want it to be – and our wall system can be configured to suit your needs. Best of all, with the Elite basement wall systems you can start enjoying your new addition sooner. Our exclusive panel systems install in a fraction of the time and

with less mess and disruption compared to traditional construction methods.

Our top of the line Majestic wall system is made from the same foam core panel and antimicrobial backing, laminated to a moisture resistant and durable magnesium oxide board and covered with a washable vinyl wall covering, perfect for basement family rooms, media rooms, offices or dens.
